

**Description — Education  
of  
Courses**

**974. College Student Personnel Administration II**  
Winter. 3(3-0) Approval of department.

Student organizations and activities; student union; on and off-campus living environments. Emphasis on planning, organization, financing, research, evaluation and administration of these programs and services.

**975. College Student Personnel Administration III**  
Spring. 3(3-0) Approval of department.

Analysis of student rights and responsibilities; academic freedom; regulation of student conduct; systems of governance and judicial processes; legal basis for student personnel programs and administration.

**982. Seminars in Education**  
Fall, Winter, Spring, Summer. Variable credit. Approval of department.  
Seminars in the various fields of emphasis.

**983. Readings and Independent Study in Education**  
Fall, Winter, Spring, Summer. Variable credit. Approval of department.  
Study on an individual or group basis in the various fields of emphasis.

**984. Laboratory and Field Experience in Education**  
Fall, Winter, Spring, Summer. Variable credit. Approval of department.  
Supervised advanced graduate practicums, observation, internships, and externships in the various areas of emphasis.

**985. Counseling Pre-Practicum**  
Spring. 3(2-1) Doctoral status in college counseling or related area and approval of department.  
Seminar emphasizing establishing good interpersonal relationships, self-understanding, an understanding of psychodynamics, and test interpretation as preparation for assuming counseling responsibilities. Approach is didactic and experiential with limited contacts with clients.

**986A. Counseling Practicum I**  
Fall. 3(0-3) 985 or approval of department.  
Supervised experience working with college students in a counseling relationship. Group discussions, group supervision and observation of counseling interviews, and individual supervision.

**986B. Counseling Practicum II**  
Winter. 3(0-3) 986A.  
Supervised experience working with college students in a counseling relationship. Group discussions, group supervision and observation of counseling interviews, and individual supervision.

**986C. Counseling Practicum III**  
Spring. 3(0-3) 986B.  
Supervised experience working with college students in a counseling relationship in the residence halls. Individual supervision, increased client contact hours, and participation in staff activities.

**987A. Seminar: Continuing Education and Social Policy**  
Fall. 3(3-0) May re-enroll for a maximum of 6 credits. Majors or approval of department.

Continuing education, as social force impacting and impacted by government and corporate policy. Examination of domestic and foreign examples of interaction between social policy and continuing education.

**987B. Seminar: Continuing Education in Higher Education Institutions**  
Winter. 3(3-0) May re-enroll for a maximum of 6 credits. Majors or approval of department.

Patterns, problems, and potential for continuing education in two and four year colleges. Problems of governance, reward system, leadership roles, etc.

**988. Behavioral Counseling Laboratory**  
Fall, Winter, Spring. 1 to 6 credits. May re-enroll for a maximum of 21 credits.

Supervised experience in behavioral counseling (individual and group), community consultation, applied behavioral research, journal manuscript preparation, preparing instructional materials, and instructional management.

**999. Research**  
Fall, Winter, Spring, Summer. Variable credit. Approval of department.

**ELECTRICAL ENGINEERING  
AND SYSTEMS SCIENCE**

**College of Engineering**

**Electrical Engineering E E**

**275. Consumer Electronics**  
Fall, Winter, Spring. 3(3-0)  
Electronic circuit components and devices; their operation in transmitters, receivers, stereo-amplifiers, etc. Electronic measurements, magnetic recording, speaker systems, and other topics will be considered.

**300. Electric Circuits I**  
Fall, Winter. 4(4-0) MTH 113.  
Current voltage and power. DC and transient circuit analysis. Forced response. Sinusoids and the phasor concept. Bridges.

**301. Electric Circuits II**  
Winter, Spring. 4(4-0) 300, MTH 214.  
Sinusoidal steady-state response. Average power and rms concepts. Complex frequency response. Magnetically coupled circuits. Two-port networks. Transfer functions.

**302. Basic Electronic Circuits**  
Spring, Summer. 4(4-0) 301, MTH 215.  
Volt-ampere characteristics of diodes and transistors. Voltage, current and power amplification. Stability, transient and high-frequency effects. Feedback, oscillators and operational amplifiers.

**303. Electronics Laboratory I**  
(384.) Winter, Spring. 1(0-3) 300 or concurrently.  
Electronic test equipment and measurement fundamentals. Experimental verification of topics covered in 300 and 301. Computer-aided circuit analysis and design.

**304. Electronics Laboratory II**  
(386.) Fall. 1(0-3) 302.  
Experimental verification of topics covered in 302. Single-stage and multistage transistor amplifier design and analysis. Applications of linear integrated circuits. Computer-aided circuit design.

**305. Electromagnetic Fields and Waves I**  
Fall, Winter. 3(3-0) MTH 215, PHY 288.

Vector analysis. Electrostatic fields: EM sources, scalar potential, Poisson's and Laplace's equations, dielectric media, capacitance, and energy storage. Boundary value problems for electrostatic fields.

**306. Electromagnetic Fields and Waves II**  
Winter, Spring. 3(3-0) 305.

Magnetostatic fields; EM sources, vector potential, magnetic media, inductance, and energy storage. Time-varying fields and Maxwell's equations: energy conservation, potential theory, and radiation concepts.

**307. Electromagnetic Fields and Waves III**  
Spring, Summer. 3(3-0) 306; 308 concurrently.

Application of Maxwell's equations: radiation, propagation, reflection, and power flow of plane EM waves; EM boundary value problems. Transmission line theory: transient and steady state waves, standing and traveling waves, reflections and standing-wave-ratio.

**308. Fields and Waves Laboratory**  
Spring, Summer. 1(0-3) 306; 307 concurrently.

Experimental investigation of: charged particle motion in EM fields, dielectric and magnetic properties and materials, probing of currents and charges, and propagation of transient and steady-state waves. Digital computer solutions for EM field and wave problems.

**345. Introduction to Electronic Instrumentation Systems**  
Fall, Winter. 4(3-3) PHY 288.

Basic electronic concepts; passive and active components; operational amplifiers; switching devices, equivalent circuits; transducers; signal conditioning; recording; data management; basic elements of control.

**400. Current Topics in Electrical Engineering**  
Winter. 1(2-0) May re-enroll for a maximum of 3 credits. Approval of department.

Topics include communication systems, instrumentation systems and data management, advance laboratory techniques, modeling, circuit design, computer analysis.

**403. Special Problems**  
Fall, Winter, Spring, Summer. 1 to 4 credits. Approval of department.

Investigation of a topic in electrical circuits or systems compatible with the student's prerequisites, interest, and ability.

**415. Control Systems**  
Fall. 3(3-0) ME 455, MTH 334.

Formulation of automatic control problems; review of modeling method; specifications, controllability and stability; controller design via root locus and state-vector methods; survey of digital control.

**418. Introduction to Network Synthesis**  
Spring. 3(3-0)

Overview: specification, approximation, synthesis. Physical realizability of passive two-element kind one-port and two-port functions. Foster and Cauer one-port syntheses. Lattice, ladder and cascade two-port syntheses. Selected active network synthesis.

- 419. Physical Phenomena and Electronic Instrumentation I**  
Winter. 4(3-3) PHY 289 or 293B; MTH 215. Interdepartmental with and administered by the Physics Department.  
Concepts of electronics relative to uses in investigations of physical phenomena and their subsequent applications to provide reliable instrumentation. Nuclear radiation detectors, photometers and magnetometers are examples of specific topics covered.
- 430. Digital Electronics I**  
Fall. 3(3-0) 302.  
Characteristics and applications of digital integrated circuits. Number systems and Boolean algebra. Gates, flip-flops, clocks, counters, shift registers, A/D and D/A converters. Basic applications of these devices.
- 431. Digital Electronics II**  
Winter. 3(3-0) 430 or CPS 421.  
Basics of minicomputer and microcomputer based systems. Programming fundamentals. The I/O bus. Interfacing, data acquisition, data storage, and data communication. Practical design problems.
- 433. Digital Electronics Laboratory**  
Winter, Spring. 1(0-3) 431 or concurrently.  
Design, construct and test representative digital electronic circuits. Hands-on experience with minicomputer, microcomputers and programmable calculators. Applications in data acquisition and control.
- 435. Guided Transmission Systems**  
Fall. 3(3-0) 308.  
Electric circuit theory from EM field theory. Guided wave theory: normal modes, propagation characteristics, power transport, wave impedances, traveling and standing waves, rectangular and circular waveguides. Electromagnetic resonators: frequency and Q.
- 436. Microwave Networks and Antennas**  
Winter. 3(3-0) 435; 438 concurrently.  
Circuit theory for wave-guiding systems: impedance description of microwave one and N-port networks, scattering matrix, excitation and coupling. Radiation and scattering: radiation fields, fields and impedance of cylindrical antennas and arrays, microwave antennas.
- 438. Transmission and Radiation Laboratory**  
Winter. 1(0-3) 435; 436 concurrently.  
Microwave transmission and radiation laboratory. Measurement of frequency, wavelength, standing waves, impedance, and power. Experiments on transmission lines, waveguides, cavity resonators, microwave circuits, and circuit and radiation properties of antennas.
- 439. Microwave Electronics and Plasma Laboratory**  
Spring. 1(0-3) 438.  
Experimental investigations on topics from 437. Laboratory experiments on klystron characteristics, traveling wave amplifier, microwave semiconductor oscillator, plasma measurements, and plasma-field interactions.
- 455. Deterministic Communication Systems**  
Fall. 3(3-0) Approval of department.  
Communication systems. Representation of signals in time and frequency domain. Processing of signals by linear, simple nonlinear and time-variant systems. Linear and nonlinear, analog and digital modulation and demodulation; for example, AM, FM, PCM.
- 456. Applied Probability in Communication Theory**  
Winter. 3(3-0) 455 or approval of department.  
Probability theory as applied in the study of communication systems. Representation of random signals and noise as stochastic processes. Autocorrelation and spectral density.
- 457. Introduction to Statistical Communication Theory**  
Spring. 3(3-0) 456; 467 concurrently.  
Representation, processing and filtering of random signals. Performance of analog, linear and nonlinear modulation systems with noise. Optimal digital communication systems.
- 466. Control System Laboratory**  
Winter. 1(0-3) 415; 313 concurrently.  
Experiments in control of processes with a digital controller. Simulation of control systems.
- 467. Communication Theory Laboratory**  
Spring. 1(0-3) 456; 457 concurrently.  
Experimental investigations on communication theory and information transmission topics from 455, 456, and 457.
- 474. Physical Properties of Electronic Devices I**  
Fall. 3(3-0)  
Energy levels in atoms and crystals. Destiny of states and elementary particle statistics. Transport properties of bulk materials. PN junction diode and bipolar junction transistor—low and high frequency.
- 475. Physical Properties of Electronic Devices II**  
Winter. 3(3-0) 474.  
Continuation of 474. Physics, models, and elementary applications of a variety of solid-state devices. Field-effect transistors, SCR's, diacs, varactors, and high-frequency and optical devices.
- 476. Physical Properties of Electronic Devices III**  
Spring. 3(3-0) 307 and 475.  
Continuation of 475. Klystrons, space-charge and traveling waves, solid-state micro-wave devices, parametric amplification, and lasers.
- 480. Integrated Circuits: Operational Amplifiers**  
Spring. 3(3-0) 302.  
Integrated circuits: design principles and fabrication. Differential-amplifier stage signal characteristics. Properties and models of operational amplifiers. Applications: signal conditioners, signal processors, signal generators, and special-purpose circuits.
- 484. Electronic Devices Laboratory I**  
Fall. 1(0-3) 474 concurrently.  
Introduction to materials handling and preparation techniques. Fabrication of electronic devices. Measurement of bulk properties of materials. Computer-aided analysis of transport phenomena in semiconductors.
- 801. Special Problems**  
Fall, Winter, Spring, Summer. 1 to 4 credits. Approval of department.  
Investigation of a topic in electrical engineering compatible with the student's prerequisites, interest, and ability.
- 811. Noise and Fluctuation Phenomena**  
Spring of even-numbered years; Summer of odd-numbered years. 3(3-0) Approval of department.  
Nyquist formulation of thermal noise; noise phenomena associated with electron tubes, transistors, beam and parametric devices, amplifiers, mixers, and detectors; techniques and equipment for noise measurements.
- 819. Electrical Properties of Materials II**  
Spring of odd-numbered years. 3(3-0)  
Temperature and frequency effects on conduction, dielectric constant, and dielectric loss; temperature, frequency and bias effects on the behavior of ferrite materials; stimulated emission and absorption in materials.
- 831. Foundations of Network Synthesis**  
Fall. 3(3-0) Approval of department.  
One-port networks; RL, RC, LC and RLC networks; driving point immittances; positive real properties; realization procedures.
- 832. Filter Synthesis I**  
Winter. 3(3-0) 831.  
Two-port LC networks; transmission characteristics; filter design techniques based on image parameters; Cauer filters.
- 833. Filter Synthesis II**  
Spring. 3(3-0) 832.  
Scattering parameters; Butterworth, Chebyshev and elliptic filters, phase equalizers synthesis based on insertion functions.
- 835. Electromagnetic Theory I**  
Fall. 3(3-0) Approval of department.  
Electrostatics, magnetostatics, electrodynamics, Maxwell's equations, force and energy equations, potential functions, Green's function, radiation of electromagnetic waves, plane waves, cylindrical waves, spherical waves.
- 836. Electromagnetic Theory II**  
Winter. 3(3-0) 835.  
Formulation of electric-circuit theory from viewpoint of electromagnetic theory; calculation of impedance; propagation of electromagnetic wave in isotropic and anisotropic media; skin effects; boundary value problems.
- 837. Guided Transmission Systems**  
Spring. 3(3-0) 835.  
Electromagnetic fields in open-wire lines, coaxial lines and wave guides; power and energy relationships; orthogonality properties; normal modes; resonant cavities; modes of propagation in stratified media; microwave circuits.
- 846. Analysis of Random Time Functions**  
Fall, Winter. 3(3-0)  
Mathematical models for time-dependent random phenomena; properties of correlation functions and spectral densities; stationarity and ergodicity; response of linear systems to random inputs; introduction to applied harmonic analysis.
- 847. Communication Systems**  
Winter, Spring. 3(3-0) 846.  
Comparative analysis of modulation systems; optimal relation between bandwidth and signal-to-noise ratio; telemetry and radar systems.
- 849. Microwave Electronics**  
Winter. 3(3-0) 835.  
Principles of microwave generators, including klystrons, magnetrons, traveling-wave tubes and particle accelerators; non-linear electron-wave interactions; crossed-field devices; solid state microwave electronics.

**Descriptions — Electrical Engineering and Systems Science  
of  
Courses**

- 850. Ionized Gases**  
Spring. 3(3-0) 835 or PHY 448.  
*Interdepartmental with the Astronomy and Physics Department.*  
Elastic collision processes; Boltzmann equation; moment equations; basic plasma phenomena; motion of a charged particle in electrical and magnetic field; individual and collective charged particle behavior.
- 861. Bioelectric Field Theory**  
Spring. 3(3-0) 306.  
Volume conductor fields; quasi-static formulation, bioelectric sources, boundary conditions, field of a single cell, subthreshold neuron phenomena, integral equations for biopotentials. Electrocardiography; bioelectric sources in heart, dipole hypothesis, forward and inverse problems.
- 874. Physical Electronics**  
Fall. 4(4-0) Approval of department.  
Application of quantum mechanics in solids, band theory of semi-conductors, electrical transport phenomena, induced current concept, charged particle dynamics, electron optics.
- 875. Solid-State Devices and Circuits**  
Winter. 3(3-0) 874.  
Formulation of operating properties and appropriate models of two-terminal and multi-terminal devices formed with semiconductors and solid-state materials. Basic applications.
- 880. Signal Analysis**  
Fall. 3(3-0) Approval of department.  
Continuous and discrete signals — generation, representation and classification. Fourier transform, spectral analysis and filtering for continuous and discrete signals. Computer implementation of signal processing.
- 899. Research**  
(EGR 899.) Fall, Winter, Spring, Summer. Variable credit. Approval of department.
- 911. General Automata Theory I**  
Fall of odd-numbered years. 3(3-0) CPS 423 or SYS 827 or approval of department. *Interdepartmental with and administered by the Computer Science Department.*  
Characterization of machines and programs as automata; mathematical decomposition of finite automata.
- 912. General Automata Theory II**  
Winter of even-numbered years. 3(3-0)  
*911. Interdepartmental with and administered by the Computer Science Department.*  
Reliability and redundancy of finite automata. Probabilistic sequential machines. Languages definable by probabilistic and deterministic automata. Axioms for equivalence of regular expressions.
- 913. General Automata Theory III**  
Spring of even-numbered years. 3(3-0)  
*912. Interdepartmental with and administered by the Computer Science Department.*  
Degrees of difficulty of computation. Models of parallel computation. Iterative automata.
- 926. Antenna Theory I**  
Winter of even-numbered years. 3(3-0) 837.  
Linear antennas; cylindrical dipole antennas radiating, receiving and scattering elements; current and charge distributions on antennas; electromagnetic fields of antennas; coupled antennas, linear antenna arrays.
- 927. Antenna Theory II**  
Spring of even-numbered years. 3(3-0) 926.  
Microwave antennas; slot antennas; slot wave guide arrays; horn and reflector-type antennas; frequency independent antennas; pattern theory.
- 928. Microwave Laboratory**  
Summer of even-numbered years. 3(2-3) 837, 927, 989.  
Experiments on transmission line systems; scattering measurements; antenna measurements; interaction of electromagnetic waves with plasmas; radiation in plasmas; experiments on electron tubes and on lasers.
- 947. Space Communications**  
Spring of odd-numbered years. 3(3-0) 847.  
Communication theory and switching theory applied to the study of communications in space; rate of information and error probability in pulse modulation systems for long distance communications.
- 956. Microelectronics II**  
Winter of even-numbered years. 3(3-0)  
Miniaturized components; thin-film networks; solid-state circuits and operational limitations.
- 957. Semiconductor Switching Circuits**  
Spring of even-numbered years. 3(2-3) 956 or approval of department.  
Switching design considerations; theory and application of device characteristics in switching circuits. Laboratory experiments using transistors and microcircuits.
- 975. Quantum Electromagnetics**  
Winter of odd-numbered years. 3(3-0) 874.  
Tensors; four-vector formulation of classical electromagnetics; relativistic electromagnetics; Lagrangian and Hamiltonian—classical and relativistic; Schrodinger's equation—classical and relativistic; quantization of wave fields, hydrogen atoms.
- 976. Lasers and Masers**  
Spring of odd-numbered years. 3(3-0) 975.  
Coherence, emission, absorption and amplification of radiation; energy levels for optically active materials; threshold, band width, excitation modes and other operating characteristics; applications and recent developments.
- 989. Waves and Radiations in Plasmas**  
Fall of even-numbered years. 3(3-0) 850. *Interdepartmental with the departments of Astronomy and Astrophysics and Physics.*  
Plasma oscillation; interaction, electromagnetic fields with plasmas, wave propagation in magnetoionic media; plasma sheath; radiation of electric source in incompressible and compressive plasmas; electroacoustic waves; magnetohydrodynamics; research topics in plasmas.
- 999. Research**  
(EGR 999.) Fall, Winter, Spring, Summer. Variable credit. Approval of department.
- 311. Introduction to Discrete Systems**  
Fall, Winter. 3(3-0) MTH 215.  
Properties of linear discrete-time systems; z-transformation; discrete system transfer functions.
- 312. Response of Discrete and Continuous Linear Systems**  
Winter, Spring. 3(3-0) 311.  
Response of linear discrete-time systems from transfer functions. Digital filters. Discrete and continuous state-space representation; response of linear systems from state models.
- 313. Analysis of Control Systems**  
Spring, Summer. 3(3-0) 312.  
Mathematical models of physical systems; basic control actions; transient response; error analysis; root locus method; Bode plot techniques.
- 403. Special Problems**  
Fall, Winter, Spring, Summer. 1 to 4 credits. Approval of department.  
Investigation of a topic in systems science compatible with the student's academic background, interest and ability.
- 404. Biological and Ecological Concepts for Engineers and Mathematicians**  
Winter. 3(3-0) Approval of department. *Interdepartmental with and administered by the Zoology Department.*  
Biological and ecological concepts important to formal analysis of living systems, vital properties, processes, and limitations; population dynamics, selection, competition, and predation; ecological community structure and function; industrialized ecosystem.
- 410. Systems Methodology**  
Winter. 3(3-0) IDC 201, MTH 113, CPS 110 or 120. *Interdepartmental with the Engineering Department.*  
The systems approach in multidisciplinary large scale problem solving. The development of useful systems analysis tools; systems design; feasibility study; computer simulation for feasibility evaluation.
- 411. Systems Project**  
Spring. 2(3-0) 410. *Interdepartmental with the Engineering Department.*  
Completion of a systems study initiated in 410. The project may involve the design of hardware, simulation of a solution to an interdisciplinary problem, or development of a solution concept.
- 442. Systems Concepts for Biologists**  
Winter. 3(3-0) Approval of department.  
Basic concepts of systems science important to formal analysis and control of biological communities, with emphasis on modeling and on analysis of behavior through numerical solutions.
- 465. Process Optimization Methods**  
Fall, Spring. 3(3-0) MTH 215, knowledge of linear algebra. *Interdepartmental with and administered by the Chemical Engineering Department.*  
Methods for determining optimum design and operating policies of systems of varying complexity. Includes classical methods, mathematical programming and modern methods.
- 475. Introduction to Operations Research**  
Winter. 4(4-0) MTH 215, CPS 120. *Interdepartmental with and administered by the Agricultural Engineering Department.*  
Methodology and basics of operations research; formulation and analysis of probabilistic models of inventory, waiting line, and reliability processes; random process simulation and network planning models.

**Systems Science**

**SYS**

**IDC. Introduction to Environmental Systems**

For course description, see Interdisciplinary Courses.

**801. Special Problems**  
Fall, Winter, Spring, Summer. 1 to 4 credits. May re-enroll for a maximum of 8 credits. Approval of department.

**810. Introduction to Linear System Theory**  
(812.) Fall. 3(3-0) MTH 214. Interdepartmental with Computer Science Department and Social Science (College of).  
A first course in system theory for students from a range of disciplines. Mathematical representation of system variables, transform and state space method of analysis, introduction to control theory, applications to physical, economic and social systems.

**811. System Methodology and Simulation**  
Winter. 3(3-0) 810, STT 441. Interdepartmental with the Computer Science Department and Social Science (College of).  
Problem definition, design of abstract models for system design and control, simulation of systems described by differential and difference equations, generation of random variables, simulation of discrete object stochastic systems, simulation languages, applications to physical, economic and social systems.

**813. System Project**  
Spring. 3(1-6) 811. Interdepartmental with the Computer Science Department and Social Science (College of).  
Individual or team application of simulation methods to system design and/or management.

**820. System Dynamics and Control**  
Spring. 4(4-0) MTH 215; knowledge of matrices and Laplace transforms.  
Fundamentals of continuous and discrete dynamic control systems; feedback principles; transform and state variable design techniques; introduction to optimal control design.

**826. Linear Concepts in Systems Science**  
Fall. 4(4-0)  
State-space and frequency domain models of interconnected systems; solution of continuous and discrete-time linear systems; response characteristics; stability.

**827. Nonlinear Concepts in Systems Science**  
Winter. 4(4-0) 826.  
Existence, uniqueness and stability; autonomous systems and the phase space; linearization, perturbation, describing functions and harmonic balance procedures; numerical solutions.

**828. Optimization of Static Nonlinear Systems**  
Summer. 4(4-0) Students may not receive credit for both SYS 828 and MGT 835. CHE 465 or knowledge of linear programming. Interdepartmental with the Department of Chemical Engineering.  
Problem formulation, classification, convexity and applications; Kuhn-Tucker theory in nonlinear programming; constrained and unconstrained problems; techniques for quadratic, integer and geometric programming; gradient and search techniques.

**841. Optimization of Urban Traffic Flow**  
Fall. 3(3-0) Approval of department. Interdepartmental with Civil Engineering.  
Traffic flow models used in design of computerized traffic control systems. Optimal freeway ramp metering algorithms. Offline and online optimization of traffic signal timing.

**843. Ecosystem Analysis, Design and Management**  
Spring. 3(3-0) 442 or ZOL 404. Interdepartmental with the Zoology Department.  
Groups of students from various biological and non-biological disciplines will synthesize and analyze models of selected biological systems. Projects should yield information relevant to solution of contemporary ecological problems.

**847. Analysis of Stochastic Systems**  
Spring. 3(3-0) E E 846.  
Equilibrium properties of non-stationary random processes; problems of estimation, filtering and prediction; sequential and recursive decision schemes; applications of random process theory to system modeling.

**899. Research**  
Fall, Winter, Spring, Summer. Variable credit. Approval of department.

**961. Optimal Control Theory I**  
Fall. 3(3-0) 827, 828 or approval of department; MTH 426.  
Formulation of the general control problem; controllability, observability and normality in discrete-state and continuous-state systems; performance functionals; typical control problems.

**962. Optimal Control Theory II**  
Winter. 3(3-0) 961.  
Optimum control theory in continuous-state and discrete-state systems; necessary and sufficient conditions for optimal solutions, geometric interpretations relation to calculus of variations; typical applications.

**963. Optimal Control Theory III**  
Spring. 3(3-0) 962 or approval of department.  
Topics selected among: computational methods for optimal controls (solution of selected two-point boundary value problems); stochastic control theory; state estimation, Kalman filtering and related statistical methods; differential game theory.

**965. Special Topics in Optimal Process Theory**  
Spring of odd-numbered years. 3(3-0) 828 or approval of department. Interdepartmental with and administered by the Chemical Engineering Department.  
Continuation of 828 and special topics from the literature in non-linear, stochastic, and dynamic programming.

**999. Research**  
Fall, Winter, Spring, Summer. Variable credit. Approval of department.

## ENGINEERING EGR

### College of Engineering

**144. Orientation for Engineering Cooperative Education**  
Winter. 1(1-0) Applicants for the College of Engineering Cooperative Education program.  
Engineering careers, philosophy of cooperative education, rights and responsibilities of engineers.

**160. Engineering Communications**  
Fall, Winter, Spring. 4(1-6) MTH 108 or 111 or concurrently.  
Engineering graphics, a means used by engineers to communicate their ideas to others. Freehand sketching, descriptive geometry, and graphical, numerical and computer problem solutions.

**161. Mechanical Drawing**  
Fall, Winter, Spring. 2(0-4)  
Lettering and use and care of instruments. Orthographic projection, working drawings, machine sketching and isometric drawing.

**162. Mechanical Drawing**  
Fall, Winter, Spring. 2(0-4) 160 or 161.  
Continuation of 161 with emphasis on freehand lettering and sketching, advanced working drawings.

**200. Technology and Society**  
Winter. 3(3-0) One term of American Thought and Language. Interdepartmental with the Natural Science Department.  
An attempt to describe and analyze portions of current technology and its desired and undesired consequences; an exploration of avenues for assessing such consequences for future technologies.

**IDC. Introduction to Environmental Systems**  
For course description, see Interdisciplinary Courses.

**201. Introduction to Engineering Mechanics**  
Winter. 4(4-0) PHY 237. Interdepartmental with and administered by the Metallurgy, Mechanics and Materials Science Department.  
Laws of mechanics governing the behavior of rigid and deformable bodies emphasizing how these laws influence engineering design. Extensive use of demonstrations.

**260. Engineering Drawing**  
Fall, Winter, Spring. 3(0-6)  
The development of the ability to communicate graphically, pictorially, and orally. Orthographic projection, freehand sketching, oral reports and creative problem solving techniques are employed to enhance learning.

**267. Architectural Drafting I**  
Fall, Winter, Spring. 3(0-6)  
House construction detailing. Analysis and drawing of typical standard details.

**270. Computer Graphics**  
Spring. 3(3-0) 160 or 161; CPS 110 or 120; or approval of department.  
Use of computer controlled display systems for the solution of multidimensional problems.

**300. Technology and Utilization of Energy**  
Winter. 3(3-0) Initial course in any sequence of courses in the Department of Natural Science. Interdepartmental with and administered by the Mechanical Engineering Department.  
Problems of energy technology and its impact: energy sources, conversions, waste and environmental effects, future outlook for mankind.

**322. Interior Lighting Design**  
Fall, Spring. 3(2-2) HED 213, approval of department. Interdepartmental with and administered by the Department of Human Environment and Design.  
The basic principles and practices of interior design lighting, light control, distribution, quality and quantity of light as it affects man's near environment.
