

**Descriptions — Marketing and Transportation Administration
of
Courses**

810. National Transportation Policy and Plans

Fall, Winter, Summer. 4(4-0)

An operational model and theoretical perspective of national policies that are apt to shape the future of the transportation system. Interaction of government, carrier, and user logistics and distribution strategies.

811. Seminar in Marketing

Fall, Winter, Spring, Summer. Variable credit. May re-enroll for a maximum of 15 credits.

812. Problems in Logistics, Transportation, and Distribution Systems

Spring, Summer. 4(4-0) 810.

Design, application, and measurement of the cost and service performance of a specific enterprise's logistics system. Includes examination of applicable research concepts, planning models, and control techniques.

823. Seminar in Retailing

Winter. 4(4-0)

Critical analysis of available generalizations concerning the economic, social, and commercial role of retailing. Special attention to concepts of retail competition and productivity. Emphasis on research in improving retail efficiency.

831. Advanced Food Processing and Distribution Management

Fall, Spring. 4(4-0) May re-enroll for a maximum of 8 credits. Approval of department. Interdepartmental with the Department of Agricultural Economics.

Food industry adjustment to changing social, economic and internal company environment. Managerial principles and techniques applied to food processing and distribution. Student interaction with industry, labor and government representatives.

841. Management of Logistics, Transportation, and Distribution Systems

Spring. 4(4-0) 810.

A case course on management problems encountered in logistics, transportation, and distribution systems. Merits considered for alternative solutions and implementation strategies in the decision making process.

851. Market Behavior and Competitive Strategy

Fall, Winter, Summer. 5(5-0) 805.

Industrial and consumer market structure and behavior and their impact upon the firm's competitive operations and actions.

853. Market Programming

Winter, Spring, Summer. 4(4-0) 802 or concurrently, 805; AFA 840.

Planning processes leading to programming the various elements of market cultivation. Major emphasis is given to the development of a total marketing strategy for the firm. Case analysis.

854. Problem-Solving Processes in Marketing

Fall, Spring. 4(4-0) 853.

The problem-solving process is approached through the investigation and solution of current marketing problems by research teams.

855. Market Cost-Revenue Analysis

Winter. 4(4-0) One course in accounting and one in marketing. Interdepartmental with the Accounting and Financial Administration Department.

Analytical tools for use in planning and controlling marketing activities. Emphasis on the determination of factors causing marketing cost differences and the assignment of costs to those factors. Application of tools to determination of expenditure-revenue patterns and market potentials.

860. International Business

Winter, Summer. 4(4-0)

The economic environment within which the international firm operates is presented. Special emphasis on relating trade and payments theory, regional analysis, and economic development to strategy formulation of the firm. Marketing, financial, and organizational factors are considered.

862. International Marketing

Spring. 4(4-0) 805.

Models for headquarters planning and control of international marketing operations are developed. Social, cultural, institutional, and economic variables are considered in studying marketing operations in foreign environments.

863. Problems in International Business

Fall. 4(4-0) 860 or 862 or approval of department.

Examination of strategies and organization for international business. In-depth consideration of headquarters and overseas personnel, marketing, financial, and legal issues.

890. Special Problems

Fall, Winter, Spring, Summer. Variable credit. Approval of department.

905. Analysis of Business Enterprise Systems

Fall. 3 credits. 805; MGT 806.

Research concepts and scientific methods for the study of business enterprise systems. The design of research, formulation of hypotheses, concepts of measurements and use of quantitative methods in the study of business systems.

909. Theory of Transportation--Distribution Systems

Fall. 4(4-0)

Examines the functions of transportation-distribution systems. Develops the relevant elements of networks, systems, and economic theory with empirical design. Applications to the design evaluation, and control of representative macro and micro systems.

910A. Advanced Research in Marketing I

Winter. 4(4-0) Second-year doctoral students in marketing.

Advanced concepts and quantitative methods in the scientific investigation of market phenomena and the tools of market cultivation.

910B. Advanced Research in Marketing II

Spring. 5(5-0) 910A.

Continuation of 910A.

911A. History of Market Thought

Fall. 4(4-0) May re-enroll for a maximum of 15 credits. 851.

Traces the evolution of marketing institutions, techniques, theories and criticisms. The influence of changing environmental and technological factors on marketing practice and thought. Readings in retrospective and original materials, discussion and research paper.

911B. Seminar in Macro Marketing

Winter. 4(4-0) May re-enroll for a maximum of 15 credits. 911A.

Examines the relationships between competition, marketing and corporate and economic growth. Emphasis is given to a functional examination of competition and the central role of innovation in the process.

912. Research Methodology in Transportation-Distribution Systems

Winter. 4(4-0) 812, 909.

Research methodology in the design and administration of transportation-distribution systems. Emphasis on technique and methodology for conducting system design studies and evaluation of common implementational problems.

941. Transportation-Distribution Development Policy

Spring. 4(4-0) 909, 912.

Applications in theory, principles, and processes developed in MTA 909 and MTA 912 to the design of research processes and reports in significant transport and distribution problems.

957. Seminar in Micro Marketing

Spring. 4(4-0) 911A.

Examines the current state of theory concerning the planning and implementation of marketing strategies and programs, and tries to identify where future research is needed and/or will be most useful to marketing and business managers.

999. Research

Fall, Winter, Spring, Summer. Variable credit. Approval of department.

MATHEMATICS

MTH

College of Natural Science

One and one-half years of high school algebra and one year of geometry and a satisfactory score on the placement test are prerequisites for all courses in the Mathematics Department which carry credit.

081. Elements of Algebra

Fall, Winter, Spring. 0(3-0) [3(3-0)]†
Current enrollment in 103.

Fractions, decimals, real number properties, algorithms of arithmetic, simple factoring, parentheses, reciprocals, linear equations, integer exponents, applied problems, coordinate systems, graphing, solving equations by graphing.

†See page A-2 item 3.

082. Intermediate Algebra

Fall, Winter, Spring. 0(2-0) [2(2-0)]†
Current enrollment in 104, one year of high school algebra.

Properties of real numbers, polynomials, factoring, rational functions, exponents, roots and radicals, first and second degree equations, linear inequalities, complex numbers, word problems.

102. Trigonometry

Fall, Winter, Spring. 3(3-0) 1½ high school units in algebra and satisfactory score on placement test, or 082; 1 high school unit in geometry. Not open to students who have had trigonometry in high school or credit in 109.

Trigonometric functions, identities, related angles, radian measure, graphs, sum and difference formulas, simple trigonometric equations, logarithms, solution of plane triangles, inverse functions.

103. Elements of Algebra

Fall, Winter, Spring. 2(2-0) Current enrollment in 081.

Fractions, decimals, real number properties, algorithms of arithmetic, simple factoring, parentheses, reciprocals, linear equations, integer exponents, applied problems, coordinate systems, graphing, solving equations by graphing.

104. Intermediate Algebra

Fall, Winter, Spring. 3(3-0) Current enrollment in 082, one year of high school algebra.

Properties of real numbers, polynomials, factoring, rational functions, exponents, roots and radicals, first and second degree equations, linear inequalities, complex numbers, word problems.

108. College Algebra and Trigonometry I

Fall, Winter, Spring. 5(5-0) 1½ high school units in algebra and satisfactory score on placement test, or 082; 1 high school unit in geometry. Not open to students with credit in 111.

Number systems; variables; functions and relations; mathematical induction; exponents and radicals; elementary theory of equations; binomial theorem; determinants, matrices and systems of equations.

109. College Algebra and Trigonometry II

Fall, Winter, Spring. 5(5-0) 1½ high school units in algebra and superior score on placement test, or 108; 1 high school unit in geometry. Not open to students with credit in 102 or 111.

Continuation of 108 plus trigonometry including definition of circular functions, angular measure, fundamental identities.

110. Finite Mathematics with Applications

Fall, Winter, Spring. 5(5-0) 108 or 111.

Elementary combinatorial analysis, binomial theorem, vectors and matrices, convex sets and linear programming, graph theory, applications to theory of games.

111. College Algebra with Trigonometry

Fall, Winter, Spring, Summer. 5(5-0) 1½ years of high school algebra, 1 year of high school geometry, satisfactory score in algebra placement examination, trigonometry or 102 or concurrently. Not open to students with credit in 108 or 109.

Sets and equations, simultaneous equations and matrices, vectors, inequalities, functions and relations, inverse functions, elementary theory of equations, trigonometric equations and identities, polar coordinates, parametric equations, straight line analytic geometry.

† See page A-2 item 3.

112. Calculus I with Analytic Geometry

Fall, Winter, Spring, Summer. 5(5-0) 109 or 111.

The sequence 112, 113, 214, 215 is an integrated course in calculus, analytic geometry and differential equations covering derivatives, curve sketching, definite and indefinite integrals, area, volume, transcendental functions, vector analysis, solid geometry, partial differentiation, multiple integrals, infinite series, power series, differential equations.

113. Calculus II with Analytic Geometry

Fall, Winter, Spring, Summer. 5(5-0) 112.

A continuation of 112.

122. Calculus I

Fall, Winter, Spring. 5(5-0) 109 or 111; not open to engineers, physical science or mathematics majors or to students with credit in 112.

The first of a two-term course in primarily single variable calculus with an introduction to several variables for students who want only one or two terms of calculus.

123. Calculus II

Fall, Winter, Spring. 5(5-0) 122, not open to engineers, physical science or mathematics majors or to students with credit in 113.

The second of a two-term course in primarily single variable calculus with an introduction to several variables for students who want only one or two terms of calculus.

190. Freshman Mathematics Seminar

Winter, Spring. 3(3-0) Freshman Mathematics majors; prior or concurrent calculus enrollment.

Intended to introduce mathematics majors to the type of mathematical reasoning and subject matter they can expect to encounter in advanced mathematics courses. Specific content will vary.

201. Foundations of Arithmetic

Fall, Winter, Spring, Summer. 4(3-2) Open only to elementary education majors.

Fundamental concepts and structure of arithmetic for prospective elementary school teachers.

202. Foundations of Algebra

Fall, Winter, Spring. 4(4-0) 201; elementary education majors.

Fundamental concepts of algebra for elementary school teachers including properties of real numbers, equations, and inequalities, modular arithmetic, complex numbers, polynomials, algebraic structures, functions.

203. Foundations of Geometry

Spring. 4(4-0) 201; elementary education majors.

Fundamental concepts of geometry for prospective elementary school teachers.

214. Calculus III with Vectors

Fall, Winter, Spring, Summer. 5(5-0) 113.

Continuation of 113.

215. Calculus IV with Differential Equations

Fall, Winter, Spring, Summer. 5(5-0) 214.

Continuation of 214.

216. Mathematics of Finance

Winter. 3(3-0) 108 or 111.

Mathematical theory of interest with application to such topics as ordinary, due, and deferred annuities, amortization of debts; depreciation; capitalized cost; purchase price of bonds.

227. Calculus for Social Scientists

Fall. 4(4-0) Graduate standing; 1½ years of high school algebra or high placement score; 1 year of high school geometry. Not open to students who have credit for calculus.

The sequence 227, 228 intended for social science graduate students is mainly calculus. Course 227 includes pre-calculus, differentiation and integration of elementary functions, applications.

228. Calculus for Social Scientists

Winter. 4(4-0) 227.

Mean value theorems, approximate integration, infinite series, Taylor series, partial derivatives, double and triple integration, and applications.

290. Special Topics in Mathematics

Fall, Winter, Spring. 1 to 5 credits. May re-enroll for a maximum of 9 credits. Approval of department.

Individualized study adapted to the preparation and interests of the student. Topics studied will generally supplement and enrich the regular course.

301. Foundations of Mathematics

Fall, Winter, Spring. 3(3-0) Approval of department.

Fundamental ideas underlying elementary mathematics. Basic set theory, relations, functions, mathematical induction, meaning of mathematical proof and the axiomatic method illustrated by examples from algebra, geometry and analysis.

302. Introduction to Combinatorics and Its Applications

Spring. 4(4-0) 113.

Permutations combinations, the binomial and multinomial theorems, the principle of inclusion and exclusion, derangements, recurrence relations, Fibonacci sequences, generating functions, trees, graphs, chromatic polynomials, paths in networks.

309. Theory of Equations

Fall, Winter, Spring, Summer. 4(4-0) 113 or approval of department.

Desirable for those preparing to teach mathematics in high schools. Mathematical induction, complex numbers, theorems in roots of polynomial equations, cyclotomic equations, ruler and compass constructions, solution of cubic and quartic equations, approximation to roots, theory of determinants, an introduction to matrices and some history of the theory of equations.

315. Concepts of Geometry I

Fall, Winter, Spring. 3(3-0) 215 or 301 or approval of department.

Axiomatic structure of geometries including Euclidean, the classical non-Euclidean and projective geometries. Coordinate systems and geometric transformations.

316. Concepts of Geometry II

Winter, Spring. 3(3-0) 315.

Continuation of 315

321. Introduction to Numerical Analysis

Winter, Spring. 4(4-0) 215 and knowledge of FORTRAN programming. Students may not receive credit in both 321 and 451.

Introduction to numerical analysis; computer coding using a compiler language; approximation to roots of equations, interpolation, numerical quadrature, numerical solution of ordinary differential equations.

**Descriptions — Mathematics
of
Courses**

322. Introduction to Complex Variables
Spring. 4(4-0) 215.

Elements of functions of a complex variable. Topics selected from complex number systems, infinite series, elementary functions, differentiation and integration, Taylor and Laurent series, conformal mapping, theory of residues.

324. Foundations of Analysis
Fall, Winter. 4(4-0) 215.

Elementary set theory; functions, mappings, equivalence relations; sequences and series; Cauchy sequences; least upper bound; countability; connected and compact sets; Bolzano Weierstrass Theorem; continuity.

331. Theory of Numbers
Fall, Winter, Spring, Summer. 3(3-0)
113 or approval of department.

Diophantine equations, congruences, quadratic residues, finite fields.

334. Theory of Matrices
Fall, Winter, Spring. 4(4-0) 214 or approval of department.

Algebra of matrices, vector spaces, rank, inverses, determinants, systems of equations, quadratic forms, Hermitian matrices, similarity transformations, characteristic values, linear transformations.

337. Concepts of Algebra
Fall, Winter. 3(3-0) 301 or approval of department.

Rings, integral domains, properties of integers, fields, groups, polynomials.

341. Initial and Boundary Value Problems
Winter, Spring. 4(4-0) 215.

Introduction to partial differential equations and initial and boundary value problems; emphasis on the wave equation, Laplace's equation and heat flow equations and their solutions by separation of variables.

381. Chemical Engineering Analysis
Fall, Spring. 3(3-0) Students may not receive credit in both 381 and 341. 215. Interdepartmental with and administered by the Chemical Engineering Department.

Formulation of ordinary and partial differential equations describing chemical systems. Boundary value problems, numerical methods, matrices and applications, to chemical engineering systems.

400H. Honors Work
Fall, Winter, Spring. 1 to 16 credits. 215 or approval of department.

Individualized reading and study in mathematics for students of high intellectual promise.

401. Geometry for Teachers
Winter, Summer. 3(3-0) Approval of department; open only to participants in teachers institutes.

Topics in geometry for junior and senior high school teachers.

402. Algebra for Teachers
Fall, Summer. 3(3-0) Approval of department; open only to participants in teachers institutes.

Discussion of the historical and postulational development of the number system and other algebraic topics.

403. Concepts in Calculus
Spring, Summer. 3(4-0) One year of calculus; open only to participants in teachers institutes.

An introduction to advanced calculus, emphasizing concepts, derivation of formulas and proofs of theorems. Includes a discussion of functions, limits and continuity, the meaning of the derivative, the mean value theorem and Taylor's formula with remainder; partial derivatives; definite and indefinite integrals and their properties, the fundamental theorem of calculus with a few applications; and infinite series.

405. Mathematical Topics for Teachers
Fall, Winter, Spring, Summer. 3(3-0)
May re-enroll for a maximum of 12 credits. Approval of department; open only to teachers participating in teacher institutes or special extension courses.

412. Axiomatic Geometry
(418.) Fall. 4(4-0) 215 or approval of department.

Euclid's and Hilbert's axioms; non-Euclidean geometries, the space concept, metric spaces and basic topological concepts, the Erlanger Program.

413. Projective Geometry
(417.) Winter. Summer of odd-numbered years. 4(4-0) 215 or approval of department.

Axioms. Basic configurations. Synthetic and analytic treatment of projective transformations, duality, conics, poles, involution. Introduction of a metric.

414. Differential and Analytic Geometry
(416.) Spring. 4(4-0) 215 or approval of department.

Coordinate systems in Euclidean three-space. Basic configurations. Vectors and the geometry of n -space. Transformations. Elementary differential geometry of curves and surfaces.

420. Ordinary Differential Equations
Fall. 4(4-0) 424.

Linear differential equations, Wronskians, Green's functions, existence and uniqueness theorems, plane autonomous systems, approximate solutions, regular singular points. Sturm-Liouville systems.

421. Vector and Tensor Analysis
Fall, Winter, Summer. 4(4-0) 215, 334 recommended.

Vector calculus, line and surface integrals, divergence and Stokes theorem, orthogonal coordinate systems, introduction to tensors; applications to the physical sciences.

422. Boundary Value Problems and Fourier Series
Fall, Winter, Spring. 4(4-0) 424.

Power series solutions of ordinary differential equations, Fourier series and orthogonal functions, partial differential equations of second order.

423. Complex Variables
Winter, Spring. 4(4-0) 424 or 427.

Analytic functions, integrals, power series, residues, poles, conformal mapping and applications.

424. Advanced Calculus
Fall, Winter, Spring, Summer. 4(4-0) 215.

Limits and continuity, function of several variables, ordinary and partial derivatives; theory of integration; multiple, line and surface integrals; infinite series, improper integrals, Beta and Gamma functions and other topics.

425. Advanced Calculus
Fall, Winter, Spring, Summer. 3(3-0)

424.
Continuation of 424.

426. Advanced Calculus
Fall, Winter, Spring. 3(3-0) 425.

Continuation of 425.

427. Real Analysis I
Fall, Winter. 4(3-0) Approval of department.

Topology, limits and continuity in E^n , functions of bounded variation, Riemann integration, calculus of several variables, linear transformations and derivatives.

428. Real Analysis II
Winter, Spring. 4(3-0) 427.

Continuation of 427.

429. Real Analysis III
Fall, Spring. 4(3-0) 428.

Continuation of 428.

432. Abstract Algebra I
Fall, Winter. 4(4-0) 215.

Introduction to the concepts of basic algebraic structures, namely: group, ring, integral domain, field polynomial ring, module, vector space, linear transformations, etc.

433. Abstract Algebra II
Winter, Spring. 4(4-0) 432.

Continuation of 432.

434. Abstract Algebra III
Fall, Spring. 4(4-0) 433.

Continuation of 433.

437. Theory of Numbers II
Spring. 3(3-0) 331 or 432 or approval of department.

Dirichlet series, distribution of primes, sums of squares, Pell's equation, continued fractions, Hurewicz Theorem.

451. Numerical Analysis I
Winter, Spring. 4(4-0) 334, 424 or approval of department. Students may not receive credit in both 321 and 451.

Numerical solution of linear and non-linear algebraic equations and eigenvalue problems; curve fitting, interpolation theory; numerical integration; differentiation and solution of differential equations; algorithms and computer programming.

452. Numerical Analysis II
Spring. 4(4-0) 451.

Continuation of 451.

461. Topology
Winter, Spring. 4(4-0) 424.

Introduction to fundamental concepts in topology, to metric and topological spaces, connectedness, compactness, continuity and simple connectedness.

462. Combinatorial Topology
Spring. 4(4-0) 461 or 424.

Unicursal graphs, surface topology, classification of surfaces, elementary set-theoretic topology, complexes.

471. Mathematical Logic

Fall. 4(4-0) 215 or approval of department.

Language of mathematics. Informal axiomatic method. Propositional logic, validity, axiom and rules of inference, introduction to algebra of sets. Predicate logic. Logic of identity.

480. Mathematics for Economists

Fall. 5(5-0) 113, graduate status in either economics, agricultural economics or College of Business, or approval of department. Interdepartmental with the Economics Department.

Matrix algebra, determinants, quadratic forms, characteristic values. Partial derivatives, chain rule, Jacobian matrix, Taylor series, constrained optimization, linear differential equations. Mathematics introduced and developed using student's background in economics.

490. Mathematical Problems

Fall, Winter, Spring. 1 to 4 credits. May re-enroll for a maximum of 8 credits. Approval of department.

Individualized study adapted to the preparation and interests of the student.

800. Set Theory and Foundations of Mathematics

Spring, Summer. 4(4-0) 424 or approval of department.

Axiomatic method; various formulations of the axiom of choice; cardinal and ordinal numbers.

801. Mathematics Education I

Fall. 3(3-0) Doctoral student in mathematical education or approval of department.

Historical origin of the content, methodology, forces, issues in mathematics education in the United States, Canada and Europe. Delineation of the important issues and problems.

802. Mathematics Education II

Winter. 3(3-0) 801.

Consideration of the historical development, philosophy, and psychological considerations underlying the various contemporary mathematics curriculum projects for grades K-12. Examination of the "forces" and "issues" surrounding the projects.

803. Mathematics Education III

Spring. 3(3-0) 802.

Research in mathematics education; emphasis on identification of strengths and weaknesses in recent research practices, identification of specific, crucial problems, pertinent issues: consideration of research models, designs, and methods.

804. Linear Algebra and Analysis I

Fall. 3(3-0) 334, 424.

Linear and matrix algebra, Grassman algebra, differential and integral calculus in R^n , linear differential equations, differential forms, closed and exact forms, Stokes theorem and elements of differential manifolds.

805. Linear Algebra and Analysis II

Winter. 3(3-0) 804.

Continuation of 804.

806. Linear Algebra and Analysis III
Spring. 3(3-0) 805.

Continuation of 805.

811. Theory of Relativity

Winter of odd-numbered years. 4(4-0)

816.

Physical bases of theory of relativity. Introduction to space-time of two and four dimensions, and to relativistic dynamics, hydrodynamics and electromagnetism. Relativistic effects in solar gravitation field.

812. Foundations of Geometry

Fall. 4(4-0) 426 or approval of department.

Incidence, affine and projective geometries. Finite projective planes, block designs. Lattice representations, coordination. Transformations Erlangen program, classical geometries. Metric topology, programs of Blumenthal and Busemann.

813. Geometry of Linear Spaces

Winter. 4(4-0) 812.

Linear topological spaces. Banach spaces, locally convex spaces. Linear transformations and functionals, extension theorems, conjugate spaces, weak topologies. Convexity, Krein-Milman theorem. Minkowski spaces, Helly's theorem. Caratheodory's theorem. Extremal structure.

814. Introduction to Differential Geometry

Spring. 4(4-0) 426 or approval of department.

Curves and surfaces in 3-space, curvature, torsion, Frenet formulas. Riemannian manifolds, Gauss and mean curvature, geodesics, theorem egregium, Gauss-Codazzi equations, Gauss-Bonnet and Hilbert theorems.

816. Tensor Calculus and Riemannian Geometry

Fall of even-numbered years. 4(4-0)

426.

Contravariant and covariant tensors, metric tensors, geodesics, Christoffel symbols, covariant differentiation, curvature, Ricci tensor, parallel propagation, relative tensors, extension, spaces with affine connection, Weyl spaces; applications to dynamics, hydrodynamics and electromagnetic radiation.

817. Theory of Linear Graphs I

Winter. 3(3-0) 334, 424, or approval of department.

Fundamental concepts of undirected and directed graphs, including connectivity, trees, blocks, partitions, isomorphism, Menger's theorem, line graphs, coverings, Kuratowski's theorem, chromatic numbers, incidence matrices, and automorphism groups.

818. Theory of Linear Graphs II

Spring of even-numbered years. 3(3-0)

817.

Advanced topics in the theory of linear graphs and combinatorial analysis. Polya's theorem and its application to enumeration problems.

821. Topology and Analysis I

Fall, Winter. 3(3-0) 426 or 804 or 804 concurrently; or approval of department.

Set theory, Zorn's Lemma, topology of R^n and metric spaces, topological spaces, Lebesgue integration, Hilbert and Banach spaces, linear operators.

822. Topology and Analysis II
Winter, Spring. 3(3-0) 821.

Continuation of 821.

823. Topology and Analysis III
Spring. 3(3-0) 822.

Continuation of 822.

824. Real and Complex Analysis
Fall. 3(3-0) 426.

Topics in this course, 825 and 826 selected from following: the real number system, linear point sets, theory of limits; continuity and differentiability properties of functions of one or more variables; sequences and series of functions: Riemann, Lebesgue and Stieltjes integrals, implicit function theory; existence theorems for differential equations.

825. Real and Complex Analysis
Winter. 3(3-0) 824.

Continuation of 824.

826. Real and Complex Analysis
Spring. 3(3-0) 825.

Continuation of 825.

827. Calculus of Variations
Spring. 4(4-0) 426.

Necessary conditions of Euler, Legendre, Weierstrass and Jacobi for minimizing integrals, sufficiency proofs, isoperimetric problems, general problems of Lagrange, Mayer, and Bolza and an introduction to optimal control theory.

828. Hilbert Spaces

Winter of even-numbered years. 4(4-0)

426.

Normed linear spaces, with particular emphasis on Hilbert spaces and linear operators in these spaces; linear functionals, conjugate spaces, operator algebra, spectral theory; and applications.

831. Theory of Matrices and Groups

Winter, Summer. 4(4-0) 334 or 431 or approval of department.

Vector spaces, matrices and linear transformations, groups of linear transformations, similarity and congruence, characteristic values and characteristic vectors, symmetric matrices and quadratic forms.

832. Group Representations
Spring. 4(4-0)

831.

Continuation of 831. Eigenvalues and eigenvectors of matrices; characters and matrix representations of groups. Symmetric and general linear group. Applications to topics such as crystal and molecular structures.

834. Algebra I

Fall. 3(3-0) Approval of department.

Elements of group theory, direct complement and chain decomposition, classification of groups; ring theory, integral domains, field theory, extensions, automorphisms. Galois theory: modules and vector spaces, Wedderburn structure theory, linear and multilinear algebra.

835. Algebra II

Winter. 3(3-0) 834.

Continuation of 834.

836. Algebra III

Spring. 3(3-0) 835.

Continuation of 835.

**Descriptions — Mathematics
of
Courses**

- 841. Boundary Value Problems I**
Fall. Summer of even-numbered years. 3(3-0) 422, 423; 334 recommended.
Linear spaces, Fourier series. Boundary value problems for ordinary and partial differential equations. Variational methods. Fredholm integral equations. Integral transform. Distribution theory.
- 842. Boundary Value Problems II**
Winter. 3(3-0) 841.
Continuation of 841.
- 843. Boundary Value Problems III**
Spring. 3(3-0) 842.
Continuation of 842.
- 844. Methods of Applied Analysis I**
Fall. 3(3-0) 334, 423, 426.
Linear transformations on finite and infinite dimensional spaces. Fredholm and Hilbert-Schmidt theory, orthogonal polynomials, differential operators, Green's functions, Fourier transforms and distributions.
- 845. Methods of Applied Analysis II**
Winter. 3(3-0) 844.
Continuation of 844.
- 846. Methods of Applied Analysis III**
Spring. 3(3-0) 845.
Continuation of 845.
- 847. Theory of Ordinary Differential Equations I**
Fall. 3(3-0) 426; *matrix theory.*
Existence theorems; uniqueness and continuation of solutions; dependence of solutions on a parameter; linear systems; phase plane analysis.
- 848. Theory of Ordinary Differential Equations II**
Winter. 3(3-0) 847.
Continuation of 847; oscillation theory, asymptotic behavior, Lyapunov stability, boundary value problems.
- 849. Theory of Ordinary Differential Equations III**
(941.) Spring. 3(3-0) 848; *approval of department.*
Advanced topics in ordinary differential equations.
- 851. Numerical Analysis I**
Fall. 3(3-0) 426; *FORTAN programming and matrix theory recommended.*
Numerical methods for solving systems of linear equations with error analysis; linear programming, the simplex algorithm; numerical procedures for determining eigenvalues and eigenvectors of matrices. Emphasis on computer applications.
- 852. Numerical Analysis II**
Winter. 3(3-0) 851.
Numerical methods with error analysis for: solutions of nonlinear algebraic equations; Lagrange and Hermite interpolation; finite differences; approximation theory, including least square and Chebyshev approximations.
- 853. Numerical Analysis III**
Spring. 3(3-0) 852.
Numerical methods with error analysis for: differentiation; quadrature including New Newton-Cotes and Gaussian-type; difference equations; solutions of ordinary differential equations using one-step and multi-step predictor-corrector methods.
- 857. Numerical Methods in Partial Differential Equations**
Spring. 4(4-0) 422, *knowledge of matrices recommended. Knowledge of computer programming desirable.*
Numerical methods for solving initial and boundary value problems of partial differential equations.
- 861. General Topology I**
Fall. 3(3-0) *Approval of department.*
An introductory course in the topology of point sets. Concepts studied include topological spaces, products, homotopy and isotopy, separation, compactness, connectedness and path connectedness, metrization and compactification.
- 862. General Topology II**
Winter. 3(3-0) 861.
Continuation of 861 dealing with identification topology, covering axioms, partitions of unity, K spaces, Baire-spaces and function spaces.
- 863. General Topology III**
Spring. 3(3-0) 862.
Development of homotopy theory required for more advanced studies with applications to covering spaces and the fundamental group.
- 864. Differential Topology**
Spring of odd-numbered years. 3(3-0) 426, 862.
Smooth manifolds and maps. Submanifolds and embeddings. Mappings and approximations. Smoothing of maps and manifolds. Manifolds with boundary.
- 870. Foundations of Mathematics I**
Fall of even-numbered years. 3(3-0) 424; 471 recommended.
Axiomatic set theory. Operations on sets, relations and functions, axiom of choice, maximal principles, cardinal and ordinal numbers, generalized, continuum hypothesis, axiom of constructibility, inaccessible cardinals.
- 871. Foundations of Mathematics II**
Winter of odd-numbered years. 3(3-0) 870.
Problems in metamathematics. Topics include: axiomatic systems, predicate calculus, consistency, completeness, and independence results, model theoretics, decision procedures, Godel's incompleteness theorem, recursive functions.
- 872. Foundations of Mathematics III**
Spring of odd-numbered years. 3(3-0) 871.
Continuation of 871.
- 881. Foundations of Applied Mathematics I**
Fall. 3(3-0) 426 or 423.
Introduction to the mathematical theory of classical applied mathematics; properties and postulates of various theories such as ideal fluids and linear elasticity; derivation of field equations; formulation of initial and boundary value problems.
- 882. Foundations of Applied Mathematics II**
Winter. 3(3-0) 881.
Continuation of 881.
- 883. Foundations of Applied Mathematics III**
Spring. 3(3-0) 882.
Continuation of 882.
- 884. Fluid Dynamics I**
Winter of odd-numbered years. 3(3-0) 881 or *approval of department.*
Derivation of the equations of fluid mechanics. Comparisons of formulations, techniques and results in the basic disciplines of potential, viscous and gas dynamic flows.
- 885. Fluid Dynamics II**
Spring of odd-numbered years. 3(3-0) 884.
Continuation of 884.
- 886. Partial Differential Equations I**
(944.) Fall. 3(3-0) 334, 423, 426.
Cauchy-Kowalewski theorem; classification, characteristics, normal forms; general theory of first order equations; potential theory.
- 887. Partial Differential Equations II**
(945.) Winter. 3(3-0) 886.
Elliptic type equations; Green's, Neumann's and Kernel functions; boundary value problems and integral equations; hyperbolic equations, geometry of characteristics, Riemann's functions.
- 888. Partial Differential Equations III**
(946.) Spring. 3(3-0) 887.
Continuation of hyperbolic equations; application of functional analysis to existence theorems, theory of Leray and Schauder.
- 890. Reading in Mathematics**
Fall, Winter, Spring Summer. *Variable credit. Approval of department.*
- 899. Research**
Fall, Winter, Spring, Summer. *Variable credit. Approval of department.*
- 921. Theory of Functions of a Complex Variable I**
Fall. 3(3-0) 823.
Conformal mapping, Riemann's theorem, reflection principle, mapping of boundary points, entire and meromorphic functions, order of a function, theorems of Picard-Nevalinna, power series with finite radius of convergence, Abel's theorem and its converses.
- 922. Theory of Functions of a Complex Variable II**
Winter. 3(3-0) 921.
Continuation of 921.
- 923. Theory of Functions of a Complex Variable III**
Spring. 3(3-0) 922.
Continuation of 922.
- 924. Functional Analysis I**
Fall. 3(3-0) 823, 862 or *approval of department.*
Topological groups and topological vector spaces, metrizable, locally convex spaces, Hahn-Banach and Krein-Milman theorems, dual spaces, Banach spaces, Hilbert spaces, Banach algebras.
- 925. Functional Analysis II**
Winter. 3(3-0) 924 or *approval of department.*
Continuation of 924.
- 926. Functional Analysis III**
Spring. 3(3-0) 925.
Continuation of 925.

- 927. Theory of Measure and Integration**
Spring. 3(3-0) 822. Interdepartmental with the Department of Statistics and Probability.
Introduction to the theory of integration over abstract spaces. Topics include: measure spaces; measurable and integrable functions; modes of convergence, theorems of Egoroff, Lusin, Riesz-Fischer, Lebesgue absolute continuity, and the Radon-Nikodym theorem; product measures and Fubini's theorem. Applications to some of the classical theories of integration and summability.
- 931. Non-Associative Algebras I**
Fall of odd-numbered years. 3(3-0) 836.
Non-associative algebras, radicals, idempotent decomposition of simple algebras.
- 932. Non-Associative Algebras II**
Winter of even-numbered years. 3(3-0) 931.
Continuation of 931. Nil algebras, structure and representations, Lie algebras.
- 933. Non-Associative Algebras III**
Spring of even-numbered years. 3(3-0) 932.
Continuation of 932. Relations between non-associative algebras, representations and cohomology theory.
- 934. Advanced Group Theory I**
Fall. 3(3-0) 836.
Permutation groups, characters, π -properties, automorphisms, lattices of subgroups, classes of infinite groups, linear groups, recent literature.
- 935. Advanced Group Theory II**
Winter. 3(3-0) 934.
Continuation of 934.
- 936. Advanced Group Theory III**
Spring. 3(3-0) 935.
Continuation of 935.
- 937. Commutative Algebra I**
Fall of even-numbered years. 3(3-0) 836.
Algebraic number theory, Noetherian rings, Dedekind domains and classical ideal theory, valuation theory, power series rings, local rings.
- 938. Commutative Algebra II**
Winter of odd-numbered years. 3(3-0) 937.
Continuation of 937.
- 939. Commutative Algebra III**
Spring of odd-numbered years. 3(3-0) 938.
Continuation of 938.
- 948. Fluid Dynamics III**
Fall of odd-numbered years. 3(3-0) 885.
General theory of perfect fluids including motion of incompressible fluids in two and three dimensions and applications to problems of wing profiles. Viscous and compressible fluids discussed briefly.

- 951. Approximation Theory I**
Fall of odd-numbered years. 3(3-0) 823 or approval of department.
Tchebycheff, approximation with polynomials, rational functions and general linear families; the Uncity problem; degree of approximation; Bernstein Polynomials; Remes algorithm, uniform approximation with constraints.
- 952. Approximation Theory II**
Winter of even-numbered years. 3(3-0) 951.
Continuation of 951. Generalized methods of measuring error: Approximation in L^1 and L^p norms, least-square approximation and orthogonal functions; spline functions; approximation in normed linear spaces.
- 953. Approximation Theory III**
Spring of even-numbered years. 3(3-0) 952.
Continuation of 952.
- 961. Topological Groups**
Winter of even-numbered years. 4 credits. 862.
General properties of topological groups, classical groups and Lie groups.
- 962. Point Set Topology**
Fall of odd-numbered years. 3(3-0) 823, 861.
Hausdorff continua, Hahn-Mazurkiewicz cyclic element theory, monotone decompositions, indecomposable continua, homogeneity.
- 964. Algebraic Topology I**
Fall. 3(3-0) 834, 862.
Simplicial and singular homotopy theory, Eilenberg-Steenrod axioms, chain complexes, cell complexes, applications to Euclidean spaces.
- 965. Algebraic Topology II**
Winter. 3(3-0) 964.
Continuation of 964 including category and functor theory, general coefficient and cohomology theory.
- 966. Algebraic Topology III**
Spring. 3(3-0) 965.
Continuation of 965 including homology groups of products, Eilenberg-Zilber theorems, cohomology products, differential topology.
- 981. Methods of Complex Analysis I**
Fall of even-numbered years. 3(3-0) 823 or approval of department.
Application of functions of a complex variable to contour integrals, conformal mapping, asymptotic methods, integral transform methods, Wiener-Hopf methods and special functions.
- 982. Methods of Complex Analysis II**
Winter of odd-numbered years. 3(3-0) 981.
Continuation of 981.
- 983. Methods of Complex Analysis III**
Spring of odd-numbered years. 3(3-0) 982.
Continuation of 982.
- 991. Advanced Topics in Geometry**
Fall, Winter, Spring, Summer. Variable credit.

- 992. Advanced Topics in Analysis**
Fall, Winter, Spring, Summer. Variable credit.
- 993. Advanced Topics in Algebra**
Fall, Winter, Spring, Summer. Variable credit. Approval of department.
Structure of rings and algebras, Lie algebras, Jordan algebras, advanced algebraic number theory, advanced matrix theory, and advanced topics in group theory, Lattice theory.
- 994. Advanced Topics in Applied Mathematics**
Fall, Winter, Spring, Summer. Variable credit. Approval of department.
Nonlinear differential equations, asymptotic theory in differential equations, existence theorem, diffraction theory, Wiener-Hopf techniques.
- 996. Advanced Topics in Topology**
Fall, Winter, Spring, Summer. Variable credit. Approval of department.
Topological groups, topology of Euclidean spaces, axiomatic homology theory, homotopy theory, function spaces.
- 999. Research**
Fall, Winter, Spring, Summer. Variable credit. Approval of department.

MECHANICAL ENGINEERING M E
College of Engineering

- 201. The Science of Sound I: Rock, Bach and Oscillators**
Winter. 3(3-0) or 4(4-0) Interdepartmental with and administered by the Physics Department.
Man-sound relationship. Production, propagation, detection of sounds. Voice hearing, scales, timbre, musical instruments. Room acoustics. Electronic reproduction and synthesis of music. Demonstrations emphasized.
- 202. The Science of Sound II**
Spring. 3(3-0) or 4(4-0) PHY 201. Interdepartmental with the Physics Department.
Nature, generation, and propagation of sound. Acoustical phenomenon and measurements. Storage and manipulation of sound in numerical form. Music programming.
- 255. Computer Models in Science and Engineering**
Spring. 3(3-0) CPS 110 or 120 or equivalent FORTRAN. Interdepartmental with the Computer Science Department.
Problem-solving; development of student's ability to formulate computable models based on finite physical elements, examples from statics, dynamics, electrical resistance, and conduction heat transfer.
- 280. Manufacturing Processes**
Fall, Winter, Spring. 3(3-0)
An introduction to the materials and processes used in manufacturing, to convert ideas into products, machines, and structures for the use of mankind. Extensive use is made of audio-visual techniques.
